Variety. Quality. Competence.

## Fine Gauge Hosiery

### KERN-LIEBERS quality

- G-rounding, perfect edge rounding right into the finest sinker throat
- Perfect stamp quality, even with extreme rigidity and hardness
- Extremely close tolerances in terms of evenness and length of tip
- OEM co-operation means we meet the toughest requirements and provide optimum consulting service
- Perfect surface integrity
- Partial hardening for areas or sinkers particularly prone to wear

### The KERN-LIEBERS product range

Needles · Sinkers · Transfer jacks · Selectors · Miscellaneous machine parts

For years now, KERN-LIEBERS elements have been leading the field in the fully-fashioned stockings sector, in part because of the benefits of rounding. The KERN-LIEBERS G-Version has become an indispensable market term for this product group. The perfectly rounded sinker guarantees an even and consistent stitch pattern.

G-Rounding  
Partial hardening

Guaranteeing trouble-free processing of even the finest and most delicate yarns.

The risk of filament breaks, which cannot be detected until the product is fully processed, is minimised.

KERN-LIEBERS stamping technology allows you to process even the most technically demanding products to a high level of quality and strength. This guarantees a particularly long product life.

For highly abrasive materials, partial hardening is the ideal enhancement to standard sinkers, maximising the sinker replacement interval.

Our needle range is rounded off with an extensive range of parts.
